Teen Urban Foresters

Fast Facts

- 8 positions per session
- 100 + hours of hands-on work
- 24+ hours of training and curriculum
- 96% time spent outdoors
- Summer session meets 3 days per week for 10 weeks
- School-year session meets Wednesday afternoons, plus a few Saturdays each month

Program Overview

Canopy employs local high-school students part-time to participate in every facet of Canopy's tree planting and tree care programs. Beyond gaining job experience, the Teen Urban Foresters (TUFs) work together to build local pride and contribute to the economic and civic renewal of their community by bringing the life-giving benefits of trees to schools, parks, and neighborhoods.

What do TUFs learn?

TUFs complete a series of training sessions that cover a range of topics: tree planting, tree biology, tree identification, the benefits of urban trees, and young tree pruning. They also complete hands-on training sessions in leading volunteers, developing their personal leadership style, and public speaking. Canopy provides enrichment opportunities for TUFs to learn about the environmental field by visiting peer organizations and working alongside environmental professionals and community leaders.

What do TUFs do?

Training experiences are complemented by field work where TUFs utilize their knowledge and practice their skills. Field work includes leading volunteers at tree planting and tree care events, and caring for young trees by watering, mulching, pruning, and adjusting stakes. The TUFs participate in community outreach for Canopy events, engage residents, and teach peers about the importance of trees in the urban environment.

Teen Urban Foresters

Fall Session: Sept. 20—Dec. 6, 2017

What is a typical month like during the school year?

Wednesdays

- Tree care (including weeding, mulching, and watering) trees in East Palo Alto.
- Design a lesson plan about trees for after school students at a local elementary school.
- Survey the number of oak trees in a Palo Alto neighborhood.
- Write a blog post about your experience at a recent Canopy event.

Saturdays

- Lead volunteers at a tree planting event in East Palo Alto.
- Work with volunteers at a tree care work day to prune young trees in Palo Alto.

“One thing I learned was that the number of people who care about trees and the environment is bigger than I anticipated. I also learned more about being a leader; the role of a leader is not to have other people follow you, but to create more leaders.”

— Alex Quintanar, Class of 2017
